

Product Information

Ad292-RL-FL

Research use only

Catalog No: AD-102-S

Lot No: 0311

Contents:

Ad292-RL-FL, 1.4×10^{12} VP/mL, 100 μ L

Buffer:

2.5% glycerol (w/v), 25 mM NaCl, 20 mM Tris, pH 8.0 (GTS buffer)

Storage: -70°C

Features and Applications:

Ad292-RL-FL is an Ad5-based adenovirus containing a 1.8 kb-long *Renilla* luciferase expression cassette in place of the E1 region, and a 2.2 kb-long firefly luciferase expression

cassette in the E3 region. The luciferase coding sequences are both under the control of a SV40 enhancer/early promoter and a SV40 late polyadenylation signal and are oriented from left to right relative to the adenovirus genome. Both E1 (3.1 kb) and E3 (2.8 kb) regions are deleted. The two *Sfi*I sites naturally present in WT Ad5 DNA were mutated by substituting A for G and C at positions 16291 and 16294 in the Ad5 genome, and C and G for respectively G and C at positions 23001 and 23004 in the Ad5 genome, introducing silent mutations in the adenovirus pVII and DNA-binding protein coding sequences.

Virus Amplification:

HEK 293 cells cultured in DMEM supplemented with 10% FCS

Purification Method:

Double CsCl banding.

Ratio OD₂₆₀/OD₂₈₀ (SDS): 1.35

Ratio OD₂₆₀/OD₂₈₀ (no SDS): 1.29

Ratio OD₃₂₀/OD₂₆₀ (SDS): 0.21
